## Design & Tooling

At KPL we are proud to offer one solution for all your thermoformed plastic requirements:

In-house tooling; KPL design and make the majority of our tools in-house at our manufacturing site in Somerset, which allow us to offer fast and cost effective solutions.

In-house design and pattern prototypes; KPL design all of our prototypes in-house and make the samples. This allows us to offer a very fast response to all our customers' NPD needs.

Quick turnaround for new products; having all the in-house facilities on the same site gives KPL more control over the design and manufacturing process, making sure we deliver on time and to the customers' expectations.

We can either work to an exact brief or come up with new and fresh ideas from scratch.

### We can offer:

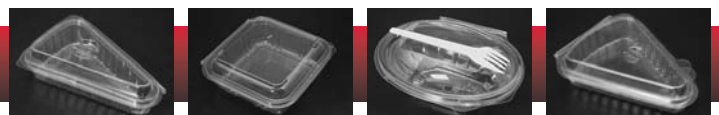

State of the art 3D design; presented in PDF, Power point or A3 printed story boards, these can be rendered to show physical product, which give a very good idea of how your actual product will look.

Patterns/prototypes; we can test how the product looks within the pack and this enables our customer to conduct packaging tests and trials before proceeding with tooling and production.

We continue to invest in this facility as we believe it gives us a true point of difference that support our customers in getting their new ideas to market.

Specialists in thermoform packaging since 1990

## Manufacturing

Our wide range of machines allow us to work with large and small customers. By working with each customer as an individual case, we make sure we tailor our service to suit their requirements.

KPL is constantly investing in new manufacturing equipment to make sure we are offering the best quality products possible.

We design and manufacture plastic packaging for the food industry offering solutions for the following markets:

- Salads**
- Bakery**
- Dairy**
- Desserts**
- Fresh Produce**
- Meat and Charcuterie**
- Snacks**
- Sushi**
- Microwavable**

For all the above markets we make and design trays that can be heat sealed, stretched or flow wrapped. We offer hinged packs with and without recessed cavities to hold eating utensils and all types of lids and bases.

We can also make products for the above and many more in APET, RPET, PP and HIPS. These materials can be made in clear and in most colours.

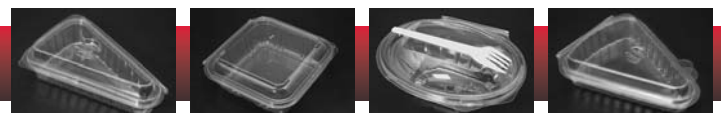

KPL offers a high level of technical support and we always work very closely with our customers to make sure all their product requirements are met.

Training is very important to us and we are proud to offer many internal and external opportunities to make sure our employees meet the requirements for their role within the company. We also have apprenticeship schemes for tool making and engineering.

We are BRC approved and regard quality as paramount to our business.
