

Decorating Heads & Depositing Nozzles

Riggs Autopack manufacture a diverse range of high quality decorating heads and depositing nozzles, all fully compatible with our depositors / filling machines. They are designed to accurately and effectively dispense hot or cold food and liquid goods, and to aesthetically enhance the appearance of the final product.

Our decorating heads are suitable for use in the manufacture of many food products such as ready meals, cakes, puddings and desserts for example. We offer a comprehensive standard range and provide a bespoke design and build service to meet the exact food production needs of the manufacturer.

Our depositing nozzles are purpose designed and typically include non-drip valves, rise and fall cut-offs, shear blades, lance probes, single or multi-hole nozzles. This range effectively dispenses hot or cold liquids, semi-liquids and suspended solids into a wide variety of containers. Please contact us with your company's specific needs.
